

Acknowledging Climate Change

Climate change conspiracy intends to deny the actuality of the climate change phenomenon.

Indicators of Climate Change

GLOBAL TEMPERATURES SINCE 1880

Causes of Climate Change

ANTHROPOGENIC FACTORS:

- Industrialization
- Deforestation

The amount of carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), and fluorinated gases derived from industrialization increases in the atmosphere.

Overloaded atmosphere traps a greater amount of the sun's radiation energy, making the planet warmer.

Manufacturing the Conspiracy

Powerful business with support of political leaders have manufactured the phony controversy that climate change is not happening.

They organize propaganda to misinform people about climate change phenomenon.

Hire employees to spread misleading information for their interests.

Skeptical message penetrates through audiences, creating a climate of confusion.

1.The average increase in Earth's temperature

2.A shift in the pattern of precipitations

3.Extension of the wildfires

4.Flooding due to elevated sea levels

Call to action

Climate change is a real serious issue facing the planet. The conspiracy is dangerous.

People should take action to stop climate change by becoming educated.

Coal and oil corporations and political leaders should accept the scientific evidence.

Progressive politicians, and the media, need to speak out against the conspiracy and act as promising catalysts for change.
