

Abstract

As we are moving from modern to advance digital era, the very need of improving technologies into an extent is in great demand. At present, the biggest problems worldwide are Health issues, which under forcing people into several drastic changes such as variation defects in their genomes and many other. The lack of plasticity of the medical profession and health care system in the face of new technology and information is about to be challenged by Digital pills, Therapeutics and Devices. A vision where each and every human get accessible to fulfill their health requirements easily, none feels deprived; people have a sense of medicine utilization, the youth sense of pride and not to abuse drugs that leads to healthy India which is possible only through Pharmacy Digitalism. Indeed these devices have exceptional promise for challenging the future of medicine not only because of their ability to produce detailed individual biological and physiological data but are also able to track their past e-health records in real time at anywhere, anytime. As a result, digitalization in health care reduces time between patient and physician, make awareness towards their health management, provide ease of access towards their symptoms, online consultation, pharmacology/pharmacokinetics of medicine such as side-effect, adverse effect and many more. Ambitious researcher sees a future where a digital regimen could replace a pill entirely. However, the idea is that a virtual coach in combination with other service could help a patient to change their behavior to become healthier or less anxious.

Introduction

Earlier in 275B.C. the ancient Egyptians thought to have performed surgery and then Romans developed medicinal tools. As Innovation and Medicine go together form Ancient to modern era health care has been transformed by waves of discovery that have brought marvels like (IoMT) Internet of Medical Things & Health INFORMATION Technologies (HIT).

But as we are evolving from Modern to Advance Era the Innovation and Invention are at a breakneck pace. As a result, digitalization in health care will bring involvement of patients towards their health management, make ease to access the behavior of medicine and provide online consultation which results in reducing time and cost.

Objective

- ❑ The objective is that a virtual coach in combination with other services could help patient to change their behavior to become healthier or less anxious.
 - ❑ A vision where each & every human get accessible to fulfill their health requirement easily.
 - ❑ A vision where people have sense of medicine utilization and the youth sense of pride & not to abuse drugs.
 - ❑ A more ambitious set of startups sees a future where a digital regimen could replace a pill entirely.
- Digital Innovations have the power to address some of the fastest growing health issues that the world faces today. The impact of such point of care diagnostics will be as big as that of mobile phones, extending the reach of medicine to places that are underserved or unserved today

CONCLUSION

A vision where each and every human get accessible to fulfill their health requirements easily, none feels deprived; people have a sense of medicine utilization, the youth sense of pride and not to abuse drugs that leads to healthy India which is possible only through Pharmacy Digitalism.

Technologies

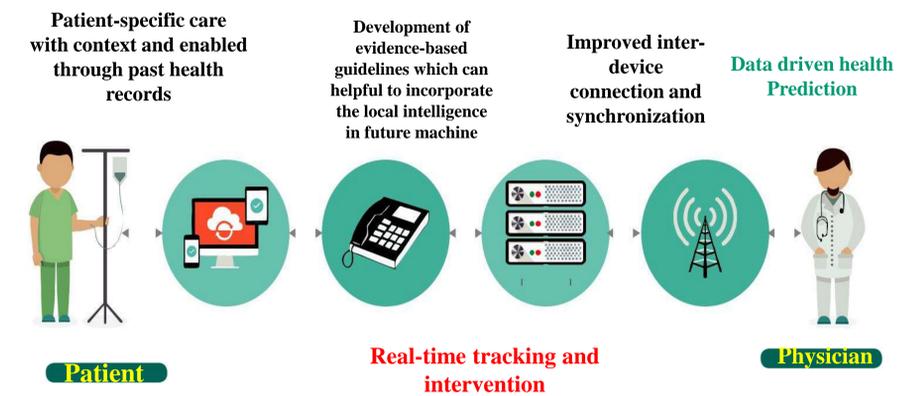

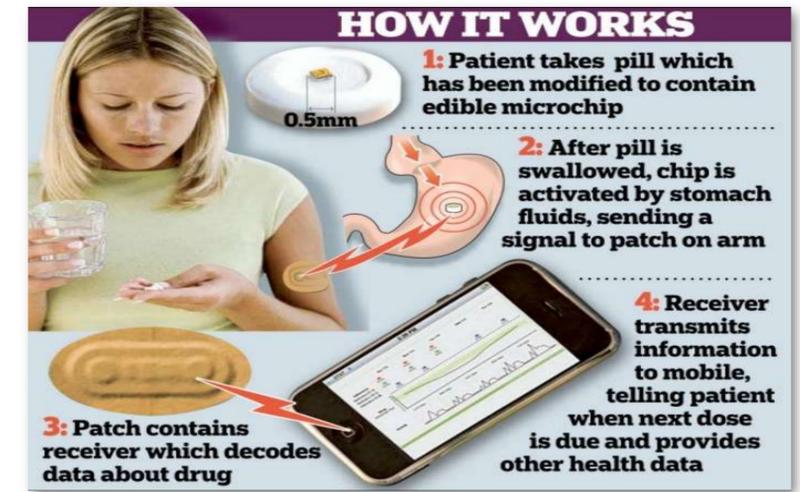

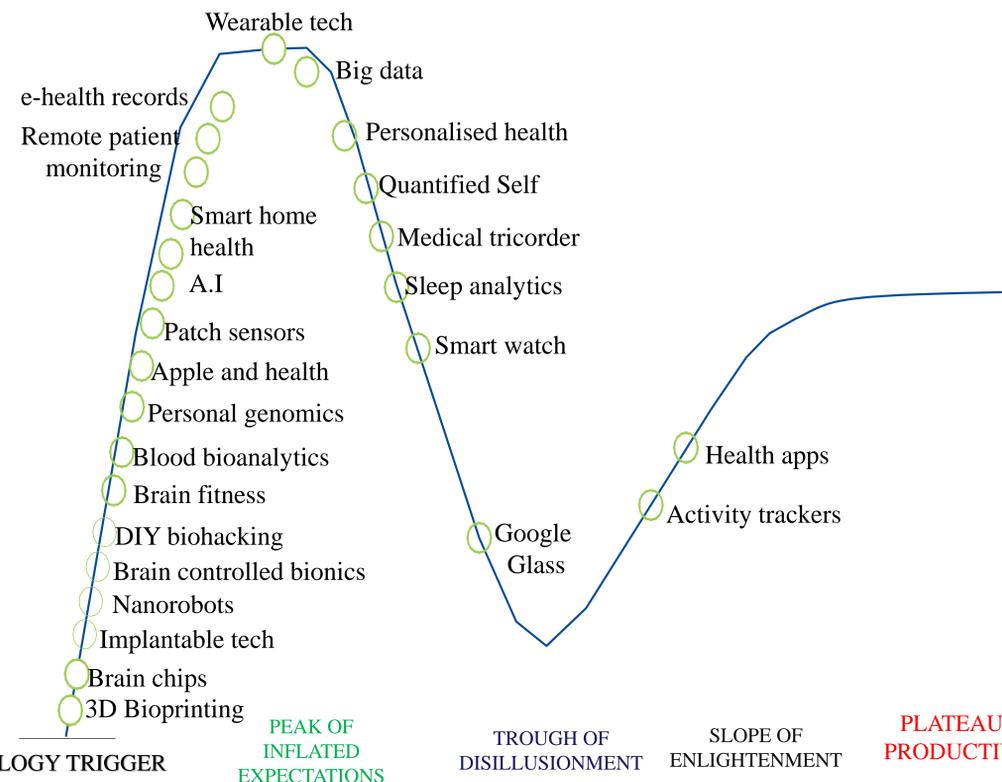

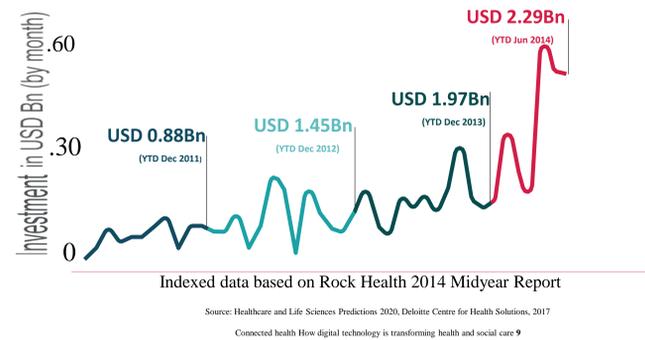

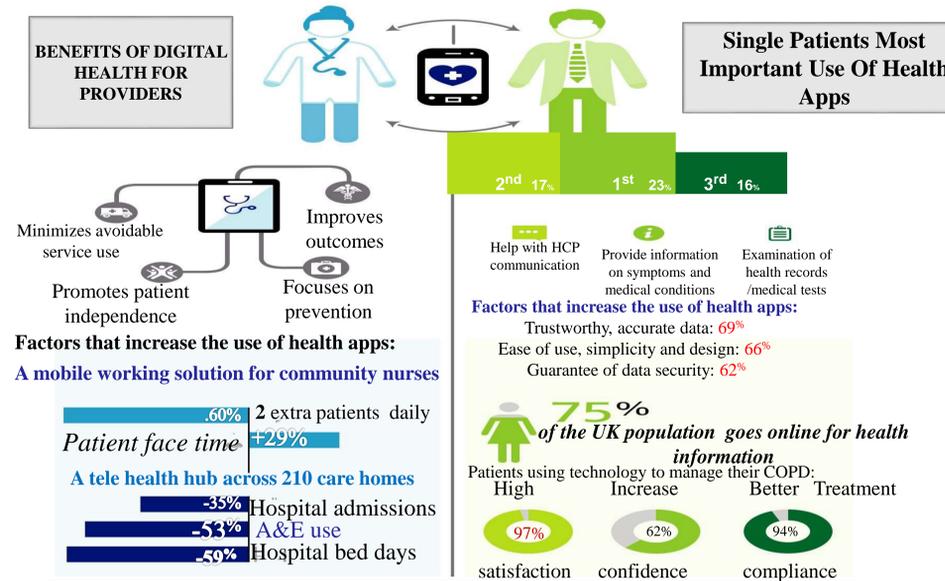

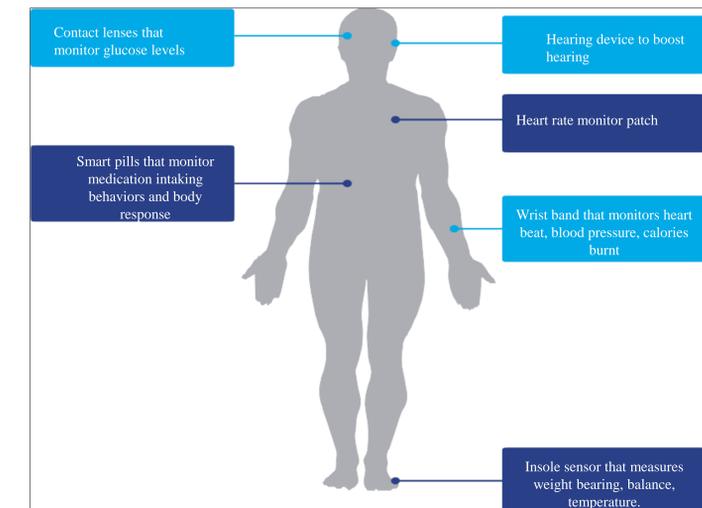

figure The functionality and use of increasingly unobtrusive bio-sensing wearable

Acknowledgement

I would like to give my gratitude to Dr. Rohit Saraswat for their guidance and support. Also i'm very thankful to RPC's principal and all staff teachers for giving me insight for presenting my work.
